

Dear Hepburn Wind supporter,

We'd appreciate two minutes of your time to [show your support for wind energy](#) at this vital time.

After five years of hard work, our community wind farm is rapidly taking shape. By the middle of the year, our two turbines are expected to be generating clean energy - more than enough to power the houses of Daylesford and much of the surrounding area.

It's fair to say that most of our supporters believe strongly that our governments are not doing enough to address climate change, that Australia needs to source more of its energy *without pollution* and that our model shows that communities can benefit from the transition we must make.

Unfortunately, the very vocal minority that opposes action on climate change, renewable energy and wind farms are at work again.

As he prepares to pack up his desk in Canberra, Senator Steve Fielding has fired the parting shot in his climate change denial campaign by organising a Federal Senate inquiry into the 'Social and economic impact of rural wind farms'.

[Let the Senate know you support wind energy.](#)

To date the inquiry has received more than 100 submissions. A quick look at the submissions received to date shows that wind farm objectors and climate change deniers around the world have been busy.

[Please help balance up the response by using our simple web page to quickly send a submission.](#)

Anyone can make a submission to the senate committee, and even a simple message makes a powerful statement. We have set up a page with some basic facts and a template that you can modify if you wish.

The Senate's deadline is **5pm, Thursday 10 February 2011**. Our website contains information about the inquiry and links to the Senate's website.

[Please click here to make a submission](#), it'll only take a couple of minutes.

Thank you for speaking out!

The Hepburn Wind Team
