## 500 hour service

Both turbines have now completed their 10 day reliability tests as well as 500 hours of operation. The two turbines will be shutdown for five days this week while two maintenance crews carry out a very significant service.

Turbine 2 completed its 10 day reliability test and generated around 208 MWh, almost exactly the same as Turbine 1 in the previous 10 days. This is more power than 39 average sized homes use in a year, and prevented an estimated 208 tons of carbon pollution elsewhere in Victoria.

## Complaints process

As a community organisation, we are especially committed to being good neighbours. We have established a formal complaints process and have been undertaking home visits to check in with local residents. Information on our processes can be found at [hepburnwind.com.au/complaints](http://hepburnwind.com.au/complaints).

We are keen to hear from anyone who has any issue – we intend to go beyond our compliance obligations.

## Seeking community fund feedback

Right from the start, it has been our priority to give generously from the sale of our clean energy to help other local ideas become a reality.

In keeping with our commitment to transparency, we have published a draft of our fund application guidelines at [hepburnwind.com.au/fund](http://hepburnwind.com.au/fund). We are open to receiving feedback until 9 August – in time for our first funding round to be opened shortly after.

## Become a member...

Our shares are now \$1.10 each. Locals can join from \$110.
